Re-Open Empty Auto Plants Create Green Jobs Now

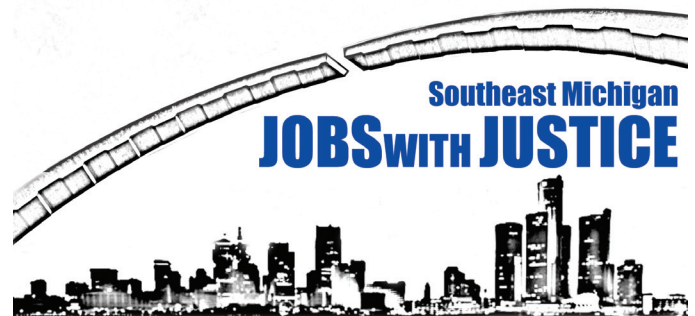

Once known as “The City That Put the World on Wheels,” Detroit can now become “The City That Turned the World Green.” Just like the intercontinental railroad, interstate highway and the Internet ignited economic growth in the past, Clean Energy can revive our nation’s economy and create millions of new jobs.

Long-time residents, recent arrivals, urban farmers, artists and young entrepreneurs have shown us the winning formula for Detroit’s comeback.

Where once we were a center of good-paying, blue-collar jobs based on fossil-fuels. Now Detroit can become the center of good-paying, green-collar jobs based on Clean Energy. Former autoworkers and unemployed youth can now be manufacturing solar panels, wind turbines, fast trains as well as more electric vehicles, batteries and charging stations. In addition, Green Collar jobs also include weatherizing homes and public buildings, recycling trash for reuse of natural resources, and many more jobs that don’t exist today. Let’s take the next step to putting Detroit Back to Work.

Rally at the old Ford Highland Park plant
Woodward and Sears, Highland Park
Friday, Nov. 4, 2011
5 to 6 p.m.
